

Archaeological Sites

An archaeological site is a place where humans have lived or spent time. Artifacts, features, and ecofacts can all be found on these sites.

Types of archaeological finds: Artifacts

An artifact is an object made, used, or altered by humans.

Antler effigy
comb

Arrow points

Clay pipe

All above examples are drawn from artifacts found on the Lawson Site

Types of archaeological finds: Features

A feature is something made or built by humans that can't be collected like artifacts. Features might be too large, too fragile, or evidence of something that is no longer there.

Other examples of features are:

- Garbage pits
- Burials
- Storage pits
- Building foundations
- Clusters of artifacts

Roads

Footprints

Hearths

Post molds

Types of archaeological finds: Ecofacts

Examples of ecofacts are:

An ecofact is term used to classify natural objects that have been used by people with no modification.

If a bone has been modified into

that modification makes it an artifact.
